Lab 10 — Schedule the Weekly Report and Review the Project

Topic 03 · Content Production and Scheduled Work

THE COURSE SCENARIO · THE LUMO COLD KOPI LAUNCH

The situation. It is late October 2026. Lumo Kopi Co. launches Lumo Cold Kopi, its first ready-to-drink canned kopi, in Singapore on 1 December — six weeks away — and in Kuala Lumpur in January. The marketing team is small, the budget is S$60,000, and nothing has been produced yet: no research, no deck, no posts, no video.

Your role. You are the Lumo marketing team. Instead of juggling a dozen separate chats, you run the whole launch from one Claude Project. Its lead agent plans each job, starts parallel threads for the pieces, and brings the results back for you to check and approve.

The mission. By the end of the day the project holds everything the launch needs — verified market research, a dashboard, a deck and brief, a brand-voice skill, two weeks of social posts, a launch video — and scheduled tasks that keep it moving while you are away.

Scenario

Lab 8 scheduled the daily post. The launch also needs a report every Monday, and nobody should have to remember it. You schedule it inside the project beside the daily post, then do the housekeeping a real project needs: correct its memory when a plan changes, and read the usage of the lead agent and each thread to see what parallel work costs.

Objective

By the end of this lab you can schedule a weekly report beside the daily post, edit project memory and review thread usage.

You will build

A weekly-report scheduled task beside Lab 8's daily post, an updated project memory and a usage review.

Tools: Claude Projects, scheduled tasks, memory, Gmail connector

In the project

Instructions — HOW: Reviews: which instructions are now out of date.

Context — WHAT: Reviews: which context files the launch-date change affects.

Folder — WHERE: Updates: project memory records the 8 December Singapore launch.

Scheduled — WHEN: NEW: Weekly launch report, Mondays at 8:00am — beside Lab 8's daily post.

Data files

None — this lab works from what the project already holds.

Lab folder on GitHub: labs-threads/lab-10-schedule-and-review

Before you start

Note: Scheduled tasks that run locally need the desktop app open. To run them with your laptop closed, add a cloud environment in Project settings → Environment.

Steps and prompts — Schedule, update memory, review

Each prompt sits under the step that sends it. Copy it from the box, or with one click from the Lab Prompts page: https://tertiarycourses.github.io/C1382-Claude-AI-Masterclass/prompts/threads/

This lab has **three blocks**. Block 1 schedules the weekly report. Block 2 changes the plan through memory. Block 3 is a review you send at the end.

1. **Send Block 1 with your own email address in place of <YOUR EMAIL>, and read the task before it is saved.**

   Mondays at 8:00am. The task runs inside the project, so it inherits the goal, instructions, context and memory — the prompt stays short.

   BLOCK 1 — SCHEDULE

   Send this to the lead agent:

   LAB 10 · BLOCK 1 — SCHEDULE · COPY INTO CLAUDE

   ```
   Schedule a recurring task in this project: "Weekly launch
   report", Mondays at 8:00am. Summarise last week's posts from
   social-calendar.csv and anything new in the Lumo Launch Drive
   folder in five bullet points, and email the summary to
   <YOUR EMAIL>. Draft only - do not send anything else.

   Show me the task before you save it.
   ```

   Open **Scheduled** and confirm both tasks are listed: Today's Lumo post from Lab 8, and Weekly launch report.

2. Open Scheduled in the project and confirm both tasks are listed.

   Today's Lumo post from Lab 8 and the weekly report: two timetables, one project. This is where you would add a monthly competitor scan next.

3. Send Block 2, then read the list of things that depend on the date.

   Expect the calendar, Task 1, the deck's title slide and timeline, and the brief. Memory is how one fact reaches every thread.

4. **Open Project settings → Memory and find the new launch-date entry. Edit it if the wording is wrong.**

   The project writes memory, but you own it. Delete anything you would not want every future thread to believe.

   BLOCK 2 — MEMORY

   Send this to the lead agent:

   LAB 10 · BLOCK 2 — MEMORY · COPY INTO CLAUDE

   ```
   Remember this for the project: the Singapore launch has moved
   from 1 December to 8 December 2026. Kuala Lumpur is unchanged.
   Tell me everything in the project that depends on the launch
   date - posts, tasks, the deck, the brief - and propose the
   changes. Do not make them yet.
   ```

   Open **Project settings** → **Memory**, find the new entry, and correct the wording if needed.

5. Send Block 3 at the end of the lab.

   A project that can list its own threads and outputs is one a colleague can pick up tomorrow.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

6. **Open Project settings → Usage and read the lead agent's and each thread's tokens.**
   Parallel threads finish faster but use more in total. Compare the research threads from Lab 2 with the single-thread labs.

   BLOCK 3 — REVIEW

   Send this at the end of the lab:

   LAB 10 · BLOCK 3 — REVIEW · COPY INTO CLAUDE

   ```
   Review this project for me: list the threads you started today,
   what each produced, and where each output is saved. Then tell
   me which context files, instructions or memory entries are now
   out of date.
   ```

   Compare its list with **Project settings → Usage**, which shows the tokens used by the lead agent and each thread.

Check

DONE WHEN Two tasks are listed under Scheduled — Today's Lumo post from Lab 8 on weekdays at 9:00am and Weekly launch report on Mondays at 8:00am — both drafting and emailing only, with nothing published. Project memory records the 8 December Singapore launch, and the lead agent listed what depends on it. Project settings → Usage shows tokens for the lead agent and for each thread you started today.

Use only the supplied mock data and your own test accounts. Never put real customer, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
