Lab 03 — Build the Market Insights Live Artefact

Topic 01 · Claude Projects and Market Research

THE COURSE SCENARIO · THE LUMO COLD KOPI LAUNCH

The situation. It is late October 2026. Lumo Kopi Co. launches Lumo Cold Kopi, its first ready-to-drink canned kopi, in Singapore on 1 December — six weeks away — and in Kuala Lumpur in January. The marketing team is small, the budget is S$60,000, and nothing has been produced yet: no research, no deck, no posts, no video.

Your role. You are the Lumo marketing team. Instead of juggling a dozen separate chats, you run the whole launch from one Claude Project in Cowork: its instructions, brand kit and working folder are set up once, and every task you start inside it already knows the brand.

The mission. By the end of the day the project holds everything the launch needs — verified market research, a dashboard, a deck and brief, a brand-voice skill, two weeks of social posts, a launch video — and scheduled tasks that keep it moving while you are away.

Scenario

The research brief is a document; the launch team wants something they can explore. You turn the survey and competitor data into a Live Artefact — KPI tiles, a channel chart, a price ladder and a city filter — refine it in plain English, save it and download a copy. The launch deck in Lab 5 quotes this dashboard's numbers.

Objective

By the end of this lab you can turn research data into an interactive Live Artefact dashboard and save it.

You will build

A saved Market Insights Live Artefact, plus a downloaded HTML copy.

Tools: Claude Projects, Live Artefacts

In the project

Instructions — HOW: Uses: S$ prices with two decimals on every tile and chart.

Context — WHAT: Uses: the product sheet, for Lumo's own price beside the competitors.

Folder — WHERE: Uses: the survey and competitor CSVs in the folder; save the HTML copy here too.

Scheduled — WHEN: Not used — runs when you send the prompt.

Data files

From this lab's **data/** folder in lab-03-market-insights-artefact:

- `data/lumo-consumer-survey-2026.csv`
- `data/lumo-competitors.csv`

Lab folder on GitHub: labs/lab-03-market-insights-artefact

Before you start

Note: Artefacts run in a sandbox and cannot call the internet, which is why the prompt says to bake the data in.

Steps and prompts — Build the Market Insights dashboard

Each prompt sits under the step that sends it. Copy it from the box, or with one click from the Lab Prompts page: https://tertiarycourses.github.io/C1382-Claude-AI-Masterclass/prompts/

1. **In the project, send the lab prompt with the two CSV files attached or in Context.**
   The project already knows the brand colours from the guidelines in Context — you do not attach them again.

   LAB 03 · PROMPT · COPY INTO CLAUDE

   ```
   Using lumo-consumer-survey-2026.csv and lumo-competitors.csv, build
   a Live Artefact: an interactive Market Insights dashboard for the
   Lumo Cold Kopi launch.

   Include:
   - KPI tiles: respondents, % likely to buy (intent 4 or 5), top
     discovery channel, competitor median price.
   - A bar chart of discovery channels.
   - A bar chart of purchase drivers.
   - A price ladder: the six competitors and Lumo at S$3.90, cheapest
     to dearest, with Lumo highlighted.
   - A filter for city: All, Singapore, Kuala Lumpur. The KPI tiles and
     both survey charts must follow the filter.

   Bake the data into the artefact - do not fetch anything. Use the
   Lumo brand colours from the brand guidelines. Title it
   "Lumo Cold Kopi - Market Insights".
   ```

2. Check the KPI tiles with the filter on All.
   400 respondents, 62% likely to buy, Instagram top channel, competitor median S$4.30 — the same numbers as the Lab 2 brief.

3. Switch the filter to Singapore, then Kuala Lumpur.
   The respondents tile should read 240, then 160. If a chart does not change, ask Claude to wire it to the filter.

4. Check the price ladder.
   Kopi Kaki Cold at S$3.20 is cheapest, Northpoint Cold Brew at S$5.60 is dearest, and Lumo sits third at S$3.90, between Daily Grind RTD at S$3.70 and Frostbean at S$4.20.

5. Ask for one refinement, for example: Put the price ladder beside the channel chart.
   Refining by conversation is the normal way to work — you never edit the code yourself.

6. Save the artefact, then download a copy as HTML.
   A saved artefact persists and can be reopened; the download is a file you can share with someone who does not use Claude.

Check

DONE WHEN The Market Insights artefact shows 400 respondents, 62% likely to buy, Instagram as the top channel and a S$4.30 competitor median. The city filter changes the respondent count to 240 (Singapore) and 160 (Kuala Lumpur) and both survey charts follow it. The price ladder runs from S$3.20 to S$5.60 with Lumo highlighted at S$3.90. The artefact is saved and an HTML copy is downloaded.

Use only the supplied mock data and your own test accounts. Never put real customer, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
