Lab 10 — Schedule the Weekly Report and Review the Project

Topic 03 · Content Production and Scheduled Work

THE COURSE SCENARIO · THE LUMO COLD KOPI LAUNCH

The situation. It is late October 2026. Lumo Kopi Co. launches Lumo Cold Kopi, its first ready-to-drink canned kopi, in Singapore on 1 December — six weeks away — and in Kuala Lumpur in January. The marketing team is small, the budget is S$60,000, and nothing has been produced yet: no research, no deck, no posts, no video.

Your role. You are the Lumo marketing team. Instead of juggling a dozen separate chats, you run the whole launch from one Claude Project in Cowork: its instructions, brand kit and working folder are set up once, and every task you start inside it already knows the brand.

The mission. By the end of the day the project holds everything the launch needs — verified market research, a dashboard, a deck and brief, a brand-voice skill, two weeks of social posts, a launch video — and scheduled tasks that keep it moving while you are away.

Scenario

Lab 8 scheduled the daily post. The launch also needs a report every Monday, and nobody should have to remember it. You create it as a second scheduled task on the project, then do the housekeeping a real project needs: record a changed plan in the memory file, and review what the project now holds.

Objective

By the end of this lab you can schedule a weekly report beside the daily post, keep the project memory file current and review the project.

You will build

A weekly-report scheduled task beside Lab 8's daily post, an updated memory file and a project review.

Tools: Claude Projects in Cowork, scheduled tasks, Gmail connector

In the project

Instructions — HOW: Reviews: which instructions are now out of date.

Context — WHAT: Reviews: which context files the launch-date change affects.

Folder — WHERE: Updates: lumo-project-memory.md records the 8 December Singapore launch.

Scheduled — WHEN: NEW: Weekly launch report, Mondays at 8:00am — beside Lab 8's daily post.

Data files

None — this lab works from what the project already holds.

Lab folder on GitHub: labs/lab-10-schedule-and-review

Before you start

Note: Replace <YOUR EMAIL> in Block 1. Copy social-calendar.csv from Lab 8 into the project folder if Claude saved it elsewhere.

Steps and prompts — Schedule, update memory, review

Each prompt sits under the step that sends it. Copy it from the box, or with one click from the Lab Prompts page: https://tertiarycourses.github.io/C1382-Claude-AI-Masterclass/prompts/

This lab has **three blocks**. Block 1 is pasted into the **Create scheduled task** dialog, not the chat. Block 2 updates the memory file, and Block 3 is a review you send at the end.

1. Open Scheduled tasks from the sidebar (or the project's Scheduled panel), choose New task, then Set up manually.
   You did this in Lab 8 for the daily post; this time the timetable is weekly.
2. **Name it Weekly launch report and paste Block 1 into Instructions, with your own email.**
   The task runs in the project, so it inherits the instructions, context and folder — the prompt stays short.

   BLOCK 1 — WEEKLY REPORT TASK

   Paste into the Instructions field of a new scheduled task named "Weekly launch report":

   LAB 10 · BLOCK 1 — WEEKLY REPORT TASK · COPY INTO CLAUDE

   ```
   Summarise last week's posts from social-calendar.csv and anything
   new in the Lumo Launch Drive folder in five bullet points, and
   email the summary to <YOUR EMAIL>. Draft only - do not send
   anything else.
   ```

   Pick the project, set **Frequency** to weekly, Mondays at 8:00am, and save.
3. Pick the Lumo Cold Kopi Launch project, set Frequency to weekly, Mondays at 8:00am, and save.
   Frequency defaults to Manual — a task left on Manual never runs.
4. Confirm both tasks appear under Scheduled: Today's Lumo post and Weekly launch report.
   Two tasks, two timetables, one project. This is where you would add a monthly competitor scan next.
5. **Start a new task in the project and send Block 2.**
   Expect the calendar, Today's Lumo post, the deck's title slide and timeline, and the brief. The memory file is how one fact reaches every later task.

   BLOCK 2 — MEMORY

   Start a new task in the project and send:

   LAB 10 · BLOCK 2 — MEMORY · COPY INTO CLAUDE

   ```
   Add this to lumo-project-memory.md: the Singapore launch has
   moved from 1 December to 8 December 2026. Kuala Lumpur is
   unchanged. Then tell me everything in the project folder and
   scheduled tasks that depends on the launch date - posts, tasks,
   the deck, the brief - and propose the changes. Do not make them yet.
   ```

   Open **lumo-project-memory.md** in the folder and check the new line.
6. Open lumo-project-memory.md and check the new launch-date line. Edit it if the wording is wrong.
   Claude writes the file, but you own it. Delete anything you would not want every future task to believe.
7. **Send Block 3 at the end of the lab.**
   A project that can list its own files and what each is for is one a colleague can pick up tomorrow.

   BLOCK 3 — REVIEW

   Send this at the end of the lab:

   LAB 10 · BLOCK 3 — REVIEW · COPY INTO CLAUDE

   ```
   Review this project for me: list every file in the project
   folder, which lab produced it, and what it is for. Then tell me
   which instructions, context files or memory-file lines are now
   out of date.
   ```

   Compare its list with the folder on your computer.
8. Open Settings → Usage and see how much of your plan today's labs used.
   Parallel tasks finish faster but use more in total — worth knowing before you schedule work every day.

Check

DONE WHEN Two scheduled tasks are listed on the project — Today's Lumo post from Lab 8 on weekdays at 9:00am and Weekly launch report on Mondays at 8:00am — both drafting and emailing only, with nothing published. lumo-project-memory.md records the 8 December Singapore launch, Claude listed what depends on it, and the project review matches the files in your Lumo Launch folder.

Use only the supplied mock data and your own test accounts. Never put real customer, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
