Lab 02 — Run Market Research in Parallel Threads

Topic 01 · Claude Projects and Market Research

THE COURSE SCENARIO · THE LUMO COLD KOPI LAUNCH

The situation. It is late October 2026. Lumo Kopi Co. launches Lumo Cold Kopi, its first ready-to-drink canned kopi, in Singapore on 1 December — six weeks away — and in Kuala Lumpur in January. The marketing team is small, the budget is S$60,000, and nothing has been produced yet: no research, no deck, no posts, no video.

Your role. You are the Lumo marketing team. Instead of juggling a dozen separate chats, you run the whole launch from one Claude Project. Its lead agent plans each job, starts parallel threads for the pieces, and brings the results back for you to check and approve.

The mission. By the end of the day the project holds everything the launch needs — verified market research, a dashboard, a deck and brief, a brand-voice skill, two weeks of social posts, a launch video — and scheduled tasks that keep it moving while you are away.

Scenario

Before anyone writes a post, the team needs to know the market. Four subjects need research — competitors, the customer survey, pricing and social trends — and none depends on another. You give the whole job to the lead agent in one message. It starts one thread per subject, each with its own data file, then merges the four findings into one research brief, which you check against the data.

Objective

By the end of this lab you can hand a multi-subject research job to the lead agent and verify the merged brief.

You will build

A research brief (lumo-research-brief.docx) merged from four parallel threads, saved in the project.

Tools: Claude Projects, lead agent and threads, web search

Data files

From this lab's **data/** folder in lab-02-market-research-threads:

- `data/lumo-consumer-survey-2026.csv`
- `data/lumo-competitors.csv`
- `data/lumo-social-trends.csv`

Before you start

Note: Attach the three CSV files from the Lab 02 data folder, or add them to the project's Context first.

Steps and prompts — Research the market in four threads

Each prompt sits under the step that sends it. Copy it from the box, or with one click from the Lab Prompts page: https://tertiarycourses.github.io/C1382-Claude-AI-Masterclass/prompts/

1. Open the Lab 02 data folder and glance at the three CSV files.
   Know your source: 400 survey rows, six competitors, twelve content themes.

2. **In the Lumo Cold Kopi Launch project, attach the three files and send the lab prompt.**
   One message, four subjects. You are briefing the lead agent, not doing the splitting yourself.

LAB 02 · PROMPT · COPY INTO CLAUDE

```
Research the market for the Lumo Cold Kopi launch. The data is in
the three files I have attached. Split this into four threads,
one per subject, and run them in parallel:

Thread 1 - COMPETITORS (lumo-competitors.csv): price per can, pack,
  positioning and channel for each brand. Where is the gap Lumo
  can own?
Thread 2 - CUSTOMERS (lumo-consumer-survey-2026.csv): share likely
  to buy (intent 4 or 5), split by age band and city; top purchase
  drivers; top discovery channels.
Thread 3 - PRICING: where S$3.90 sits against the competitor
  median, and the share of respondents willing to pay S$3.50 or
  more.
Thread 4 - SOCIAL TRENDS (lumo-social-trends.csv): the three content
  themes with the highest engagement, with one post idea each.

When all four threads are done, merge them into one research brief,
lumo-research-brief.docx: a one-paragraph summary, one section per
thread with the key numbers, and three recommendations for the
launch. Show your working for every percentage. Tell me which
thread produced each section, and flag anything the threads
disagree on.
```

3. Watch the lead agent announce the threads it starts.
   Each thread has one subject and one file — a focused brief with a fresh context window. That is why parallel research stays sharp.
4. Open one thread while it works and read its brief.
   You can see exactly what the lead agent asked each thread to do. A poor result usually traces back to a poor thread brief.
5. When the merged brief arrives, check the survey numbers.
   Expect 400 respondents, 248 likely to buy (62%), and 112 of 152 in the 25-34 band (74%).
6. Check the channel and driver findings.
   Instagram is the top discovery channel at 136 (34%), then TikTok at 104 (26%). Taste is the top driver at 124 (31%).
7. Check the pricing section.
   The competitor median is S$4.30, so S$3.90 sits below it; 228 respondents (57%) would pay S$3.50 or more.
8. Check the trends section and the recommendations.
   The top theme should be Taste tests and first-sip reactions. Do the three recommendations follow from the numbers above them?
9. Open lumo-research-brief.docx and confirm each section names its thread.
   Traceability: every number in the brief can be traced to one thread and one file.

Check

DONE WHEN lumo-research-brief.docx has a summary, four thread sections and three recommendations. It reports 400 respondents, 248 likely to buy (62%), 112 of 152 aged 25-34 (74%), Instagram as the top discovery channel at 34%, Taste as the top driver at 31%, a competitor median of S$4.30 with Lumo's S$3.90 below it, 228 respondents (57%) willing to pay S$3.50 or more, and Taste tests and first-sip reactions as the top content theme.

Use only the supplied mock data and your own test accounts. Never put real customer, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
