Lab 05 — Analyse the Survey, Then Build the Deck and Brief

Topic 02 · Connectors, Skills and Plugins

THE COURSE SCENARIO · THE LUMO COLD KOPI LAUNCH

The situation. It is late October 2026. Lumo Kopi Co. launches Lumo Cold Kopi, its first ready-to-drink canned kopi, in Singapore on 1 December — six weeks away — and in Kuala Lumpur in January. The marketing team is small, the budget is S$60,000, and nothing has been produced yet: no research, no deck, no posts, no video.

Your role. You are the Lumo marketing team. Instead of juggling a dozen separate chats, you run the whole launch from one Claude Project. Its lead agent plans each job, starts parallel threads for the pieces, and brings the results back for you to check and approve.

The mission. By the end of the day the project holds everything the launch needs — verified market research, a dashboard, a deck and brief, a brand-voice skill, two weeks of social posts, a launch video — and scheduled tasks that keep it moving while you are away.

Scenario

Before the deck, the numbers. Claude analyses the 400-row survey by writing and running code, and saves the tables and a chart as an Excel workbook. Then it builds the Friday deck in Slides and the campaign brief in Docs, choosing its built-in skills itself. You check every figure and download the deck as PowerPoint.

Objective

By the end of this lab you can analyse survey data with Claude's code tool and save it to Excel, then produce a launch deck in Slides and a campaign brief in Docs.

You will build

A survey analysis workbook (lumo-survey-analysis.xlsx), an eight-slide launch deck in Slides (downloaded as .pptx) and a campaign brief in Docs.

Tools: Claude Projects, code execution, built-in skills (xlsx, pptx, docx), Slides, Docs

In the project

Instructions — HOW: Uses: follow the brand guidelines for anything customer-facing.

Context — WHAT: Uses: the brand kit, for the name, tagline, price and claims.

Folder — WHERE: Uses: attach the survey CSV; lumo-survey-analysis.xlsx is saved and the deck downloads as .pptx.

Scheduled — WHEN: Not used — runs when you send the prompt.

Data files

From this lab's **data/** folder in lab-05-launch-deck-and-brief:

- `data/lumo-consumer-survey-2026.csv`

Lab folder on GitHub: labs-threads/lab-05-launch-deck-and-brief

Before you start

Note: You do not name a skill in either block. Ask for a workbook, a deck or a document; Claude picks the format and the built-in skill.

Steps and prompts — Analyse the survey, then build the deck and brief

Each prompt sits under the step that sends it. Copy it from the box, or with one click from the Lab Prompts page: https://tertiarycourses.github.io/C1382-Claude-AI-Masterclass/prompts/threads/

This lab has **two blocks**. Block 1 has Claude analyse the survey with code and save an Excel workbook. Block 2 builds the deck and the campaign brief.

1. **In the project, attach lumo-consumer-survey-2026.csv and send Block 1.**
   Everyone analyses the same 400-row survey. Claude's code tool writes Python, runs it on the file and reads the result — you never write the code.

   BLOCK 1 — ANALYSE

   Attach lumo-consumer-survey-2026.csv and send:

   LAB 05 · BLOCK 1 — ANALYSE · COPY INTO CLAUDE

   ```
   Analyse the attached survey with code. Count "likely to buy" as
   purchase_intent 4 or 5.

   1. Likely to buy by city, and by age band: count, base and %.
   2. Willing to pay S$3.50 or more (max_price_sgd), by city.
   3. Likely to buy among 25-34s in Singapore only.
   4. One chart: likely-to-buy % by age band.
   5. Save it all as lumo-survey-analysis.xlsx: a Summary sheet,
      one sheet per table, and the chart.

   Show the totals so I can check them, then give me three
   findings in one sentence each.
   ```

   Click the code step and check the totals before you use any number.

2. Click the code step in Claude's reply and read what it ran.
   Find the line that counts purchase_intent 4 or 5. Checking the method is how you know the numbers were calculated, not guessed.

3. Check the tables against these figures.
   Singapore 152 of 240 (63%), Kuala Lumpur 96 of 160 (60%). By age: 18-24 60 of 88 (68%), 25-34 112 of 152 (74%), 35-44 50 of 96 (52%), 45+ 26 of 64 (41%). Would pay S$3.50 or more: Singapore 143 (60%), Kuala Lumpur 85 (53%). 25-34s in Singapore: 72 of 96 (75%).

4. Download lumo-survey-analysis.xlsx and open it in Excel.
   The xlsx built-in skill made a real workbook: a Summary sheet, one sheet per table and the chart.

5. Ask one follow-up question about the data: Which coffee frequency group is most likely to buy?
   Expect 1-2 times a week at 52 of 76 (68%), with daily drinkers lowest at 90 of 156 (58%). Follow-up questions are cheap — the data is already loaded.

6. **Send Block 2.**
   No attachments: the research brief, the dashboard data and the brand kit are all already in the project.

   BLOCK 2 — BUILD

   Then send:

   LAB 05 · BLOCK 2 — BUILD · COPY INTO CLAUDE

```
Using our research brief, the Market Insights dashboard and the
brand kit, create two things for Friday's launch meeting.

1. A launch deck in Slides, eight slides:
   1 Title - Lumo Cold Kopi: Kopi, Chilled Right
   2 The opportunity - the three survey numbers that matter most
   3 Who we are for - 25-34s in Singapore, with the evidence
   4 Competitors - a price ladder chart with Lumo highlighted
   5 Where they find us - a discovery channel chart
   6 The campaign - message, channels and dates
   7 Budget - the S$60,000 split, noting the two open questions
   8 Next steps and owners

   Use the Lumo brand colours. Real charts, not pictures of charts.

2. A campaign brief in Docs: objective, audience, key message,
   proof points, channels, budget, timeline, KPIs, and a "claims
   we must not make" section.

Every number must come from the research brief or the dashboard.
List the source of each number at the end of the brief.
```

   Check every figure against the research brief and your analysis.

7. Open the deck when it appears and page through all eight slides.
   Check the charts are real charts — click one; a real chart has editable data behind it.

8. Check slide 2 and slide 4 against your research.
   62% likely to buy, 74% among 25-34s, Instagram 34%; a price ladder from S$3.20 to S$5.60 with Lumo at S$3.90.

9. Check slide 7.
   The S$60,000 split should carry the two open questions from Lab 4 — Instagram and Influencers — not quietly pick one figure.

10. Open the campaign brief in Docs and read the "claims we must not make" section.
    It should rule out "healthy" and any claim the product sheet does not support. This section protects every post you write later.

11. Ask for one change to each, for example: Shorten slide 6 to three bullets.
    Slides and Docs are edited in place by conversation, the same way as an artefact.

12. Download the deck as PowerPoint and open it.
    The download is the file you take into the meeting — check the charts survived.

Check

DONE WHEN The analysis shows Singapore 152 of 240 (63%) and Kuala Lumpur 96 of 160 (60%) likely to buy, 25-34s at 112 of 152 (74%) and 72 of 96 (75%) among 25-34s in Singapore, and lumo-survey-analysis.xlsx opens in Excel with a Summary sheet, the tables and a chart. The deck has eight slides in the Lumo colours, with real charts for the price ladder and the discovery channels, the survey figures 62%, 74% and 34%, and a budget slide that shows S$60,000 with the Instagram and Influencers lines marked as open questions. The campaign brief in Docs has all nine sections, including "claims we must not make", and lists a source for every number. The deck opens in PowerPoint with its charts intact.

Use only the supplied mock data and your own test accounts. Never put real customer, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
