Lab 09 — Produce a 15-Second Launch Video

Topic 03 · Content Production and Scheduled Work

THE COURSE SCENARIO · THE LUMO COLD KOPI LAUNCH

The situation. It is late October 2026. Lumo Kopi Co. launches Lumo Cold Kopi, its first ready-to-drink canned kopi, in Singapore on 1 December — six weeks away — and in Kuala Lumpur in January. The marketing team is small, the budget is S$60,000, and nothing has been produced yet: no research, no deck, no posts, no video.

Your role. You are the Lumo marketing team. Instead of juggling a dozen separate chats, you run the whole launch from one Claude Project. Its lead agent plans each job, starts parallel threads for the pieces, and brings the results back for you to check and approve.

The mission. By the end of the day the project holds everything the launch needs — verified market research, a dashboard, a deck and brief, a brand-voice skill, two weeks of social posts, a launch video — and scheduled tasks that keep it moving while you are away.

Scenario

The TikTok and Instagram posts need a launch video. You give the project the supplied product images and logo; one thread writes a five-scene script and storyboard with lumo-brand-voice, another writes and runs the code that animates the images and captions into a 15-second, 1080 × 1920 MP4. You check it frame by frame and ask for changes in plain English.

Objective

By the end of this lab you can script, storyboard and render a vertical launch video from supplied brand assets.

You will build

lumo-launch-15s.mp4 (1080 × 1920, 15 seconds), with its script and storyboard.

Tools: Claude Projects, threads, code execution

In the project

Instructions — HOW: Uses: brand voice for the script; nothing is published.

Context — WHAT: Uses: the brand kit, for the tagline, price and call to action.

Folder — WHERE: Adds: attach the video assets; the script, storyboard and lumo-launch-15s.mp4 are saved.

Scheduled — WHEN: Not used — runs when you send the prompt.

Data files

From this lab's **data/** folder in lab-09-launch-video:

- `data/video-assets/lumo-can.png`
- `data/video-assets/lumo-12pack.png`
- `data/video-assets/lumo-logo.png`
- `data/video-assets/scene-hawker.png`
- `data/video-assets/scene-office.png`

Lab folder on GitHub: labs-threads/lab-09-launch-video

Before you start

Note: Attach the whole video-assets folder. Use only the supplied images — never a real person's likeness or another brand's logo.

Steps and prompts — Script, storyboard and render the video

Each prompt sits under the step that sends it. Copy it from the box, or with one click from the Lab Prompts page: https://tertiarycourses.github.io/C1382-Claude-AI-Masterclass/prompts/threads/

1. Open the Lab 09 data/video-assets folder and look at the five images.
   These are the only images the video may use. Supplying assets is how you keep likenesses and logos safe.

2. **In the project, attach the folder and send the lab prompt.**
   Two threads, but not in parallel this time: the render thread waits for the script. The lead agent manages that order.

   LAB 09 · PROMPT · COPY INTO CLAUDE

   ```
   Make a 15-second vertical launch video for Lumo Cold Kopi, using
   only the five images in the attached video-assets folder.

   Use two threads:
   Thread 1 - SCRIPT: with lumo-brand-voice, write five scenes of
     three seconds each: hook, problem, product, proof, call to action.
     For each scene give the image, the on-screen text (max 6 words)
     and the motion. Save it as lumo-video-storyboard.md.
   Thread 2 - RENDER: when the storyboard is ready, write and run
     code that renders it to lumo-launch-15s.mp4: 1080 x 1920, 30 fps,
     exactly 15 seconds, large high-contrast captions in the Lumo
     colours, a gentle zoom on each image, and an end card with the
     logo, "From S$3.90" and #KopiChilledRight.

   If you cannot render video in this session, build the same thing
   as an animated HTML page at 1080 x 1920 and tell me, so I can
   screen-record it. Report the file's duration and size when done.
   ```

3. Read the storyboard when Thread 1 finishes.
   Five scenes, three seconds each, captions of six words or fewer, and no health claims — the brand-voice skill applies to scripts too.

4. When the video arrives, check the reported duration and size.
   Exactly 15 seconds and 1080 × 1920. A wrong size is the most common reason a platform crops your captions.

5. Play it through, then scrub it frame by frame.
   Check every caption is readable with the sound off and the end card shows the logo, From S$3.90 and #KopiChilledRight.

6. Ask for one change, for example: Hold the end card for one second longer and shorten scene 2.
   The video is code, so a change is a re-render, not a re-edit. Check the length is still 15 seconds afterwards.

7. If Claude built the HTML fallback instead, open it full screen and screen-record 15 seconds.
   Same storyboard, different renderer. The checks stay the same.

Check

DONE WHEN lumo-launch-15s.mp4 is 1080 × 1920, 30 fps and 15 seconds long, uses only the supplied images, shows five scenes with captions of six words or fewer in the Lumo colours, and ends on a card with the logo, "From S$3.90" and #KopiChilledRight. lumo-video-storyboard.md sits beside it and matches what plays. No scene makes a health claim.

Use only the supplied mock data and your own test accounts. Never put real customer, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
