Lab 01 — Set Up the Lumo Launch Project

Topic 01 · Claude Projects and Market Research

THE COURSE SCENARIO · THE LUMO COLD KOPI LAUNCH

The situation. It is late October 2026. Lumo Kopi Co. launches Lumo Cold Kopi, its first ready-to-drink canned kopi, in Singapore on 1 December — six weeks away — and in Kuala Lumpur in January. The marketing team is small, the budget is S$60,000, and nothing has been produced yet: no research, no deck, no posts, no video.

Your role. You are the Lumo marketing team. Instead of juggling a dozen separate chats, you run the whole launch from one Claude Project. Its lead agent plans each job, starts parallel threads for the pieces, and brings the results back for you to check and approve.

The mission. By the end of the day the project holds everything the launch needs — verified market research, a dashboard, a deck and brief, a brand-voice skill, two weeks of social posts, a launch video — and scheduled tasks that keep it moving while you are away.

Scenario

Lumo Kopi Co. launches Lumo Cold Kopi in six weeks, and the marketing work will keep coming until launch day — exactly what a Claude Project is for. You create the Lumo Cold Kopi Launch project, give it a goal, add the brand kit as context, write its standing instructions, and check that its lead agent understood all three. Every later lab runs inside this project.

Objective

By the end of this lab you can create a Claude Project with a goal, instructions, context and memory.

You will build

The Lumo Cold Kopi Launch project, with a goal, instructions, three context files and a first memory entry.

Tools: Claude desktop app, Claude Projects

Data files

From this lab's **data/** folder in lab-01-set-up-the-launch-project:

- `data/brand-kit/lumo-brand-guidelines.md`
- `data/brand-kit/lumo-product-sheet.md`
- `data/brand-kit/lumo-launch-brief.md`

Lab folder on GitHub: labs-threads/lab-01-set-up-the-launch-project

Before you start

Note: No Projects in your sidebar yet? The beta has not reached your account. Switch to Cowork mode, attach the three brand-kit files, paste Block 2 as your first message, then send Block 3.

Steps and prompts — Create the launch project

Each prompt sits under the step that sends it. Copy it from the box, or with one click from the Lab Prompts page: https://tertiarycourses.github.io/C1382-Claude-AI-Masterclass/prompts/threads/

This lab has **three blocks**. Block 1 is the project goal, pasted into the New project dialog. Block 2 is the project instructions, pasted into Project settings. Block 3 is your first message to the lead agent.

1. Download the course labs and open the Lab 01 data/brand-kit folder.
   Skim the three files — guidelines, product sheet, launch brief. You will check Claude's answers against them.

2. In the Claude desktop app, open Projects from the sidebar and click New project.
   Projects are shared across the Claude app (Chat and Cowork) and Claude Code, so the same project is reachable from all three.

3. **Name the project Lumo Cold Kopi Launch and paste Block 1 into the Goal field.**
   The goal is what the lead agent steers every decision toward, so it is worth writing as an outcome with a date and a measure.

   BLOCK 1 — GOAL

   Paste this into the Goal field of the New project dialog:

   LAB 01 · BLOCK 1 — GOAL · COPY INTO CLAUDE

   ```
   Launch Lumo Cold Kopi in Singapore on 1 December 2026.
   Produce the market research, a launch deck, a campaign brief,
   two weeks of social media posts and a 15-second launch video,
   within a S$60,000 budget, so that 25-34 year-olds on Instagram
   and TikTok know the product exists by launch day.
   ```

   Name the project **Lumo Cold Kopi Launch**, add the three brand-kit files as Context, and click **Create project**.

4. Under Context, add the three brand-kit files, then click Create project.
   Context is read, never edited — the right home for reference files you want kept exactly as they are.

5. **Click the gear icon to open Project settings, choose Memory, and paste Block 2 into Project instructions. Save.**
   Instructions are standing rules for every thread. Short, checkable rules work better than general wishes.

   BLOCK 2 — INSTRUCTIONS

   Paste this into Project settings → Memory → Project instructions:

   LAB 01 · BLOCK 2 — INSTRUCTIONS · COPY INTO CLAUDE

   ```
   You are the marketing team for Lumo Kopi Co.
   - Prices are in Singapore dollars: S$3.90 per can, S$42.00 per
     12-pack. Always two decimals.
   - Follow lumo-brand-guidelines.md for anything customer-facing.
   - Never describe the product as healthy. You may say 5 g sugar.
   - Never send an email or publish a post without my approval.
   - When a job has several independent subjects, give each one
     its own thread and merge the results for me.
   - Flag any figure that two sources disagree on. Do not pick one.
   ```

   Save the instructions, then go back to the project and send Block 3.

6. While you are in settings, open General and look at Models.
   Note the model and effort for the lead agent and for threads. You will see their cost in Lab 10.

7. **Back in the project, send Block 3 to the lead agent.**
   This is a setup check: if it cannot restate the goal or find the files, fix that now, before any real work.

   BLOCK 3 — FIRST MESSAGE

   Send this to the lead agent:

   LAB 01 · BLOCK 3 — FIRST MESSAGE · COPY INTO CLAUDE

   ```
   Before we start work, check your setup:
   1. Restate the project goal in one line.
   2. List the context files you can read and what each is for.
   3. List the three instructions you think matter most.
   4. From the product sheet, give me the price per can, the sugar
      per can and the launch date.
   Then remember this for the project: our primary audience is
   25-34 year-olds in Singapore, and our secondary market is
   Kuala Lumpur, launching 15 January 2027.
   ```

   Compare the answer with the brand kit, then open Project settings → Memory and find the new memory entry.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

8. Check the answers: S$3.90 per can, 5 g sugar, launch 1 December 2026.
   Every figure must match the product sheet. A wrong figure here means a wrong context file.
9. Open Project settings → Memory and find the memory entry about the audience and Kuala Lumpur.
   The project wrote it, so you are responsible for it. Memory you never read is memory you cannot trust.

Check

DONE WHEN The Lumo Cold Kopi Launch project exists with the goal from Block 1, the three brand-kit files under Context and the Block 2 instructions saved. The lead agent restated the goal, listed all three context files, and quoted S$3.90 per can, 5 g sugar and a 1 December 2026 launch. A memory file now records the 25-34 audience and the 15 January 2027 Kuala Lumpur launch.

Use only the supplied mock data and your own test accounts. Never put real customer, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
