Lab 06 — Capture the Brand Voice as an Agent Skill

Topic 02 · Connectors, Skills and Plugins

THE COURSE SCENARIO · THE LUMO COLD KOPI LAUNCH

The situation. It is late October 2026. Lumo Kopi Co. launches Lumo Cold Kopi, its first ready-to-drink canned kopi, in Singapore on 1 December — six weeks away — and in Kuala Lumpur in January. The marketing team is small, the budget is S$60,000, and nothing has been produced yet: no research, no deck, no posts, no video.

Your role. You are the Lumo marketing team. Instead of juggling a dozen separate chats, you run the whole launch from one Claude Project. Its lead agent plans each job, starts parallel threads for the pieces, and brings the results back for you to check and approve.

The mission. By the end of the day the project holds everything the launch needs — verified market research, a dashboard, a deck and brief, a brand-voice skill, two weeks of social posts, a launch video — and scheduled tasks that keep it moving while you are away.

Scenario

Four channels and two weeks of posts are coming, and they all have to sound like Lumo. You rewrite five off-brand captions with Claude until they are right, then use /skill-creator to turn that verified routine into a lumo-brand-voice skill. From then on, every thread in the project — and every colleague — loads the same voice by name.

Objective

By the end of this lab you can rewrite content in the brand voice, verify it, and save the routine as a skill with /skill-creator.

You will build

A lumo-brand-voice Agent Skill, tested on a new caption.

Tools: Claude Projects, Agent Skills, /skill-creator

Data files

From this lab's **data/** folder in lab-06-brand-voice-skill:

- `data/lumo-sample-captions.txt`

Lab folder on GitHub: labs-threads/lab-06-brand-voice-skill

Before you start

Note: Block 2 begins with you typing /skill-creator in the composer — it is not part of the pasted text.

Steps and prompts — Rewrite, verify, then save the brand voice

Each prompt sits under the step that sends it. Copy it from the box, or with one click from the Lab Prompts page: https://tertiarycourses.github.io/C1382-Claude-AI-Masterclass/prompts/threads/

This lab has **three blocks**, sent at different times. Block 1 does the work once. Block 2 saves it as a skill — type /skill-creator first. Block 3 tests the skill on something new.

1. Open lumo-sample-captions.txt and read the five captions.
   Each breaks at least one brand rule — a wrong price format, a health claim, too much slang, too many hashtags.

2. **In the project, attach the file and send Block 1.**
   This is the Do step of Do · Verify · Save. You never write a skill from a blank page.

   BLOCK 1 — DO

   Attach lumo-sample-captions.txt and send this first, on its own:

   LAB 06 · BLOCK 1 — DO · COPY INTO CLAUDE

   ```
   Rewrite the five captions in the attached file in the Lumo
   brand voice, following lumo-brand-guidelines.md.

   For each caption, show:
   - the original
   - your rewrite
   - every rule you applied, by name
   - any claim you removed, and why

   Then run these checks on each rewrite and show the result:
   price written as S$3.90; no "healthy" or medical claims; at
   most one Singlish word; #LumoKopi present; no more than five
   hashtags; ends with one clear call to action.
   ```

   Now stop and read the output. Ask for changes until every rewrite sounds right. Whatever you settle on here is exactly what the skill will reproduce.

3. Check each rewrite against the brand guidelines and refine until all five are right.
   This is the Verify step. Ask for changes in plain English; you are teaching the routine by correcting it.

4. **Type /skill-creator in the composer, then paste Block 2 and send.**
   skill-creator writes the SKILL.md from the run you just verified — name, description, instructions and examples.

   BLOCK 2 — SAVE

   Type /skill-creator in the composer, then paste this:

   LAB 06 · BLOCK 2 — SAVE · COPY INTO CLAUDE

   ```
   Create a skill called lumo-brand-voice from what we just did.

   Description: Use when writing or reviewing any customer-facing
   Lumo Kopi content - social posts, captions, emails, video
   scripts or ads.

   It should rewrite or draft content in the Lumo voice, apply the
   brand rules, remove claims we cannot prove, and finish with the
   same checklist of checks we used. Include two of today's
   before-and-after examples as a resource.
   ```

   Approve the skill when Claude shows it to you, then open **Customize** → **Skills** and find it.

5. Read the skill Claude proposes, especially its description, and approve it.
   The description is the one part always in context. It decides when the skill loads, so it must say WHEN to use it.

6. Open Customize → Skills and find lumo-brand-voice.
   Your own skills are listed here. Built-in skills such as pptx are not — they show in the context panel when they load.

7. **Start a new thread and send Block 3.**
   A fresh thread proves the skill works without the earlier conversation — which is exactly how other threads will use it.

   BLOCK 3 — TEST

   Start a new thread in the project and send:

   LAB 06 · BLOCK 3 — TEST · COPY INTO CLAUDE

   ```
   Use lumo-brand-voice to write an Instagram caption announcing
   that Lumo Cold Kopi 12-packs are available on Shopee from
   1 December. It's super healthy and the best kopi in Singapore!
   ```

   The skill should load by itself, remove both unprovable claims and run its checklist.

8. Check the caption: no "healthy", no "best kopi in Singapore", S$ prices, #LumoKopi present.
   Both claims were traps. A skill that removes them has learned the rule, not just the examples.

Check

DONE WHEN lumo-brand-voice appears under Customize → Skills with a description that says when to use it. In a fresh thread, Block 3 loaded the skill without being asked to find it, and the caption it returned drops "healthy" and "best kopi in Singapore", includes #LumoKopi, uses at most five hashtags and ends with one call to action, followed by the checklist results.

Use only the supplied mock data and your own test accounts. Never put real customer, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
