Lab 01 — Set Up the Lumo Launch Project

Topic 01 · Claude Projects and Market Research

THE COURSE SCENARIO · THE LUMO COLD KOPI LAUNCH

The situation. It is late October 2026. Lumo Kopi Co. launches Lumo Cold Kopi, its first ready-to-drink canned kopi, in Singapore on 1 December — six weeks away — and in Kuala Lumpur in January. The marketing team is small, the budget is S$60,000, and nothing has been produced yet: no research, no deck, no posts, no video.

Your role. You are the Lumo marketing team. Instead of juggling a dozen separate chats, you run the whole launch from one Claude Project in Cowork: its instructions, brand kit and working folder are set up once, and every task you start inside it already knows the brand.

The mission. By the end of the day the project holds everything the launch needs — verified market research, a dashboard, a deck and brief, a brand-voice skill, two weeks of social posts, a launch video — and scheduled tasks that keep it moving while you are away.

Scenario

Lumo Kopi Co. launches Lumo Cold Kopi in six weeks, and the marketing work will keep coming until launch day — exactly what a Claude Project is for. You create the Lumo Cold Kopi Launch project in Cowork, point it at a working folder, write its standing instructions, add the brand kit as context, and check that Claude understood all of it. Every later lab runs inside this project.

Objective

By the end of this lab you can create a Claude Project in Cowork with instructions, context, a working folder and a memory file.

You will build

The Lumo Cold Kopi Launch project, with instructions, three context files, a working folder and a project memory file.

Tools: Claude desktop app (Cowork), Claude Projects

Data files

From this lab's **data/** folder in lab-01-set-up-the-launch-project:

- `data/brand-kit/lumo-brand-guidelines.md`
- `data/brand-kit/lumo-product-sheet.md`
- `data/brand-kit/lumo-launch-brief.md`

Lab folder on GitHub: labs/lab-01-set-up-the-launch-project

Before you start

Note: Projects live in Cowork mode in the desktop app. Create an empty folder called Lumo Launch on your computer first — the project works inside it.

Steps and prompts — Create the launch project

Each prompt sits under the step that sends it. Copy it from the box, or with one click from the Lab Prompts page: https://tertiarycourses.github.io/C1382-Claude-AI-Masterclass/prompts/

This lab has **three blocks**. Block 1 is the project goal, pasted into the Create a project dialog. Block 2 is the standing instructions, pasted into the Instructions panel. Block 3 is your first task in the project.

1. Download the course labs and open the Lab 01 data/brand-kit folder. Create an empty folder called Lumo Launch on your computer.
   Skim the three brand-kit files — you will check Claude's answers against them. The empty folder becomes the project's working folder.
2. In the Claude desktop app, switch to Cowork, open Projects and start a new project.
   In Cowork a project is backed by a real folder on your computer, so its files stay yours to open.
3. **Under "What are you working on?" type Lumo Cold Kopi Launch, and paste Block 1 into "What are you trying to achieve?".**
   The goal is the standing context every task inherits, so write it as an outcome with a date and a measure.

   BLOCK 1 — GOAL

   Paste this into "What are you trying to achieve?" in the Create a project dialog:

   LAB 01 · BLOCK 1 — GOAL · COPY INTO CLAUDE

   ```
   Launch Lumo Cold Kopi in Singapore on 1 December 2026.
   Produce the market research, a launch deck, a campaign brief,
   two weeks of social media posts and a 15-second launch video,
   within a S$60,000 budget, so that 25-34 year-olds on Instagram
   and TikTok know the product exists by launch day.
   ```

   Name it **Lumo Cold Kopi Launch**, choose **Use a folder** and pick your Lumo Launch folder, then **Create project**.
4. Choose Use a folder, pick your Lumo Launch folder, and click Create project.
   The project page opens with four panels: Instructions, Context, Folder and Scheduled.
5. **Open the Instructions panel and paste Block 2. Save.**
   Instructions are standing rules for every task. Short, checkable rules work better than general wishes.

   BLOCK 2 — INSTRUCTIONS

   Paste this into the project's Instructions panel:

   LAB 01 · BLOCK 2 — INSTRUCTIONS · COPY INTO CLAUDE

   ```
   You are the marketing team for Lumo Kopi Co.
   - Prices are in Singapore dollars: S$3.90 per can, S$42.00 per
     12-pack. Always two decimals.
   - Follow lumo-brand-guidelines.md for anything customer-facing.
   - Never describe the product as healthy. You may say 5 g sugar.
   - Never send an email or publish a post without my approval.
   - Save every output to the project folder.
   - Read lumo-project-memory.md before you start any task.
   - Flag any figure that two sources disagree on. Do not pick one.
   ```

   Save the instructions, then add the three brand-kit files in the **Context** panel.
6. Open the Context panel and add the three brand-kit files.
   Context is read, never edited — the right home for reference files you want kept exactly as they are.
7. **Start a new task in the project and send Block 3.**
   This is a setup check: if Claude cannot restate the goal or find the files, fix that now, before any real work.

   BLOCK 3 — FIRST TASK

   Start a new task in the project and send:

   LAB 01 · BLOCK 3 — FIRST TASK · COPY INTO CLAUDE

   ```
   Before we start work, check your setup:
   1. Restate the project goal in one line.
   2. List the context files you can read and what each is for.
   3. List the three instructions you think matter most.
   4. From the product sheet, give me the price per can, the sugar
      per can and the launch date.
   Then create lumo-project-memory.md in the project folder with
   the heading "Project memory" and record: our primary audience
   is 25-34 year-olds in Singapore, and our secondary market is
   Kuala Lumpur, launching 15 January 2027.
   ```

Compare the answer with the brand kit, then open your Lumo Launch folder and read lumo-project-memory.md.

8. Check the answers: S$3.90 per can, 5 g sugar, launch 1 December 2026.
   Every figure must match the product sheet. A wrong figure here means a wrong context file.
9. Open the Lumo Launch folder on your computer and read lumo-project-memory.md.
   A classic project has no memory panel, so this file plays that role: every task reads it (Block 2 says so), and you can edit it.

Check

DONE WHEN The Lumo Cold Kopi Launch project exists in Cowork, using your Lumo Launch folder, with the Block 2 instructions saved and the three brand-kit files under Context. Claude restated the goal, listed all three context files, and quoted S$3.90 per can, 5 g sugar and a 1 December 2026 launch. lumo-project-memory.md in the folder records the 25-34 audience and the 15 January 2027 Kuala Lumpur launch.

Use only the supplied mock data and your own test accounts. Never put real customer, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
