Lab 10 — Schedule the Posts and Review the Project

Topic 03 · Content Production and Scheduled Work

THE COURSE SCENARIO · THE LUMO COLD KOPI LAUNCH

The situation. It is late October 2026. Lumo Kopi Co. launches Lumo Cold Kopi, its first ready-to-drink canned kopi, in Singapore on 1 December — six weeks away — and in Kuala Lumpur in January. The marketing team is small, the budget is S$60,000, and nothing has been produced yet: no research, no deck, no posts, no video.

Your role. You are the Lumo marketing team. Instead of juggling a dozen separate chats, you run the whole launch from one Claude Project in Cowork: its instructions, brand kit and working folder are set up once, and every task you start inside it already knows the brand.

The mission. By the end of the day the project holds everything the launch needs — verified market research, a dashboard, a deck and brief, a brand-voice skill, two weeks of social posts, a launch video — and scheduled tasks that keep it moving while you are away.

Scenario

The launch needs a post drafted every weekday morning and a report every Monday, and nobody should have to remember either. You create both as scheduled tasks on the project, then do the housekeeping a real project needs: record a changed plan in the memory file, and review what the project now holds.

Objective

By the end of this lab you can schedule recurring project tasks, keep the project memory file current and review the project.

You will build

Two scheduled tasks on the project, an updated memory file and a project review.

Tools: Claude Projects in Cowork, scheduled tasks, Gmail connector

Data files

None — this lab works from what the project already holds.

Lab folder on GitHub: labs/lab-10-schedule-and-review

Before you start

Note: Replace <YOUR EMAIL> in Blocks 1 and 2. Copy social-calendar.csv from Lab 8 into the project folder if Claude saved it elsewhere.

Steps and prompts — Schedule, update memory, review

Each prompt sits under the step that sends it. Copy it from the box, or with one click from the Lab Prompts page: https://tertiarycourses.github.io/C1382-Claude-AI-Masterclass/prompts/

This lab has **four blocks**. Blocks 1 and 2 are pasted into the **Create scheduled task** dialog, not the chat. Block 3 updates the memory file, and Block 4 is a review you send at the end.

1. Open Scheduled tasks from the sidebar (or the project's Scheduled panel), choose New task, then Set up manually.
   Create with Claude asks you questions instead; setting it up manually shows you every field.

2. **Name it Today's Lumo post and paste Block 1 into Instructions, with your own email.**
   The task runs in the project, so it inherits the instructions, context, folder and the brand-voice skill — the prompt stays short.

   BLOCK 1 — DAILY POST TASK

   Paste into the Instructions field of a new scheduled task named "Today's Lumo post":

   LAB 10 · BLOCK 1 — DAILY POST TASK · COPY INTO CLAUDE

   ```
   Take today's row from social-calendar.csv in the project folder,
   polish the post with lumo-brand-voice, and check every price and
   claim against the brand kit. Email it to <YOUR EMAIL> as a draft
   with the subject "Today's Lumo post - <date>".

   Never publish anything and never post to social media. If there
   is no row for today, email "No Lumo post scheduled today".
   ```

   Pick the **Lumo Cold Kopi Launch** project, set **Frequency** to weekdays at 9:00am, and save. Permissions defaults to *Automatically approve* — which is why the task only drafts.

3. Pick the Lumo Cold Kopi Launch project, set Frequency to weekdays at 9:00am, check Permissions, and save.
   Frequency defaults to Manual — a task left on Manual never runs. Permissions defaults to Automatically approve, so the task must only draft.

4. **Create a second task, Weekly launch report, with Block 2, Mondays at 8:00am.**
   Two tasks, two timetables, one project. This is where you would add a monthly competitor scan next.

   BLOCK 2 — WEEKLY REPORT TASK

   Paste into a second scheduled task named "Weekly launch report":

   LAB 10 · BLOCK 2 — WEEKLY REPORT TASK · COPY INTO CLAUDE

   ```
   Summarise last week's posts from social-calendar.csv and anything
   new in the Lumo Launch Drive folder in five bullet points, and
   email the summary to <YOUR EMAIL>. Draft only - do not send
   anything else.
   ```

   Pick the project, set **Frequency** to weekly, Mondays at 8:00am, and save.

5. Confirm both tasks appear under Scheduled, with the right days and times. Use Run now if it is offered.
   A task scheduled at the wrong time is a silent failure. A test run's email shows exactly what arrives each morning.

6. **Start a new task in the project and send Block 3.**
   Expect the calendar, Task 1, the deck's title slide and timeline, and the brief. The memory file is how one fact reaches every later task.

   BLOCK 3 — MEMORY

   Start a new task in the project and send:

   LAB 10 · BLOCK 3 — MEMORY · COPY INTO CLAUDE

   ```
   Add this to lumo-project-memory.md: the Singapore launch has
   moved from 1 December to 8 December 2026. Kuala Lumpur is
   unchanged. Then tell me everything in the project folder and
   scheduled tasks that depends on the launch date - posts, tasks,
   the deck, the brief - and propose the changes. Do not make them yet.
   ```

   Open **lumo-project-memory.md** in the folder and check the new line.

7. Open lumo-project-memory.md and check the new launch-date line. Edit it if the wording is wrong.
   Claude writes the file, but you own it. Delete anything you would not want every future task to believe.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

8. **Send Block 4 at the end of the lab.**
   A project that can list its own files and what each is for is one a colleague can pick up tomorrow.

   BLOCK 4 — REVIEW

   Send this at the end of the lab:

   LAB 10 · BLOCK 4 — REVIEW · COPY INTO CLAUDE

   ```
   Review this project for me: list every file in the project
   folder, which lab produced it, and what it is for. Then tell me
   which instructions, context files or memory-file lines are now
   out of date.
   ```

   Compare its list with the folder on your computer.

9. Open Settings → Usage and see how much of your plan today's labs used.
   Parallel tasks finish faster but use more in total — worth knowing before you schedule work every day.

Check

DONE WHEN Two scheduled tasks are listed on the project — Today's Lumo post on weekdays at 9:00am and Weekly launch report on Mondays at 8:00am — both drafting and emailing only, with nothing published. lumo-project-memory.md records the 8 December Singapore launch, Claude listed what depends on it, and the project review matches the files in your Lumo Launch folder.

Use only the supplied mock data and your own test accounts. Never put real customer, personal or confidential data into a training exercise, and send lab emails to yourself rather than to a real recipient.
